Adult Hypertension Guideline v3 (SYNTHETIC) (page 1)

SYNTHETIC TEST DOCUMENT - fictional content, not medical guidance.

1. What is hypertension

Hypertension means blood pressure that stays raised over time. In this guideline, hypertension is defined as a clinic blood pressure of 140/90 mmHg or higher on repeated readings. Hypertension often causes no symptoms, so regular measurement is the main way it is found.

2. Why it matters

Long-term raised blood pressure increases the risk of heart attack, stroke and kidney disease. The strength of evidence for this link is graded high in this guideline.

3. Measuring blood pressure

Home blood pressure monitoring can be used to confirm a diagnosis made in clinic. An average home reading of 135/85 mmHg or higher supports the diagnosis in this guideline.

4. Lifestyle measures

Lifestyle measures include reducing salt intake, at least 150 minutes of physical activity a week, limiting alcohol and stopping smoking. Evidence that reducing salt lowers blood pressure is graded high.

5. Medicines

Medicine choice is made by the prescriber. Zentoril is one fictional option described in its product label. Doses are set out in the product label, not in this guideline.

6. Changes from version 2

Version 3 lowers the clinic threshold from 150/95 mmHg (version 2, 2019) to 140/90 mmHg.
